Rebuttal: 7/10/00; Surrebuttal: 7/12/00  
PSC Docket No.: 1997-239-C

Dear Charles:

Enclosed for filing please find the original and twenty-six (26) copies of the  
Prefiled Direct Testimony of Office of Regulatory Staff Witness Katie C. Morgan in the  
above referenced matter. Please date stamp the extra copy enclosed and return it to me  
via our courier.

Also, we have served same on all parties of record and enclose a Certificate of  
Service to that effect.

Please let me know if you have any questions.

Sincerely,

*Wendy B. Cartledge*

**THE OFFICE OF REGULATORY STAFF  
DIRECT TESTIMONY AND EXHIBITS  
OF  
KATIE C. MORGAN**

RECEIVED  
2005 MAR 23 PM 4:52  
SC PUBLIC SERVICE  
COMMISSION

**DOCKET NO. 1997-239-C  
UNIVERSAL SERVICE FUND**

**TESTIMONY OF KATIE C. MORGAN****FOR****THE OFFICE OF REGULATORY STAFF****DOCKET NO. 97-239-C****IN RE: UNIVERSAL SERVICE FUND****Lifeline/Link-up**

**Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND OCCUPATION.**

A. My name is Katie C. Morgan. My business address is 1441 Main Street, Suite 300, Columbia, South Carolina 29201. I am employed by the State of South Carolina as the Director of the Telecommunications, Transportation, Water and Wastewater Division of the Office of Regulatory Staff.

**Q. PLEASE STATE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.**

A. I am a 1986 graduate of the College of Charleston where I earned a B.S. in Mathematics and a B.A. in Political Science. In 1988, I earned a Master of Public Administration Degree from the University of South Carolina. Also in 1988, I joined the staff of Governor Carroll Campbell's office where I served as a grants administrator before taking the position of program manager in the Governor's Energy Office in 1989. In 1992, I joined the newly created South Carolina State Energy Office operating under the State Budget and Control Board. I was named deputy director of the State Energy Office in 1994 with responsibilities for working with investor owned gas and electric utilities on their integrated resource plans,

1 demand side management activities for state and local government, and forecasting  
2 energy use for the state. In 1996, I moved into the position of Assistant Executive  
3 Director of the Budget and Control Board (Board). In this position, I was  
4 responsible for various legislative initiatives and partnership programs sponsored  
5 by the Board.

6 In 1998, I was named Deputy Director for the Office of Information Resources  
7 with responsibilities for the financial management of the state's telephone system,  
8 data network, and computer systems. I was also charged with the financial  
9 responsibility for the state's K-12 School Technology Initiative. This program  
10 used state funding to leverage monies available through the federal Universal  
11 Service Fund to provide data connectivity to the state's schools and libraries. In  
12 2000, the duties of the Office of Information Resources merged with the State's  
13 Information Technology Planning organization and Information Technology  
14 Management Office. In this new Board agency, I was Deputy Chief Information  
15 Officer with responsibility for strategic planning, finance, statewide IT  
16 procurement, billing, accounting, human resources, legislative initiatives, customer  
17 relations and marketing. In July 2004, I left my position with the State CIO to join  
18 the Office of Regulatory Staff.

19 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS**  
20 **PROCEEDING?**

21 A. The purpose of my testimony is to modify and supplement information provided to  
22 the Public Service Commission of South Carolina by the Office of Regulatory Staff  
23 in its December 15, 2004 letter concerning the Lifeline and Link up programs.

1 **Q. ARE YOUR FINDINGS CONTAINED IN THIS TESTIMONY AND**  
2 **ACCOMPANYING EXHIBITS?**

3 A. Yes, my testimony and the attached exhibits detail my findings and  
4 recommendations.

5 **Q. PLEASE EXPLAIN HOW YOU COMPILED INFORMATION FOR YOUR**  
6 **TESTIMONY AND EXHIBITS.**

7 A. Since submission of the letter to the Commission in December 2004, I have had  
8 additional conversations with utility representatives, staff members of the  
9 Department of Social Services, the Department of Health and Human Services, the  
10 Budget and Control Board's Office of Research and Statistical Services, and the  
11 Council on Aging. I have also examined additional information concerning the  
12 April 29, 2004 FCC order pertaining to the increase of the federal Lifeline program  
13 to 135% of the Federal Poverty Guidelines. From these discussions and readings, I  
14 have learned more about 1) the current eligibility intake requirements and  
15 processes, 2) the current process used by the telephone companies to verify  
16 continuing eligibility of Lifeline recipients, 3) the outreach efforts by the telephone  
17 companies and social services agencies to inform potential clients of the  
18 availability of Lifeline, and 4) the impact the modifications to the current Lifeline  
19 process may have on the telephone companies providing Lifeline.

20 **Q. PLEASE DESCRIBE YOUR UNDERSTANDING OF THE CURRENT**  
21 **ELIGIBILITY INTAKE AND VERIFICATION PROCESSES.**

22 A. My understanding of the current eligibility intake requirements and verification  
23 process is based on a document provided by the South Carolina Telephone

1 Association entitled "New Lifeline Eligibility Verification Procedure." This  
2 document is attached as exhibit KCM-1. (It should be noted that this document  
3 refers to the Budget and Control Board's Office of Research and Statistics as  
4 "ORS." This should not be confused with the Office of Regulatory Staff.) This  
5 process was developed through a collaborative effort between DSS, DHHS, the  
6 Office of Research and Statistics, and the various Incumbent Local Exchange  
7 Carriers (ILECs). All of the South Carolina ILECs, other than Chesnee Telephone,  
8 PBT, Verizon, and West Carolina Telephone, currently use this process.

9 The Lifeline Eligibility Verification process involves two steps: application and  
10 on-going verification. The first step requires the customer to complete a Lifeline  
11 Authorization Form and submit it to DSS or DHHS for certification. Certification  
12 is based on eligibility for Food Stamps, Temporary Assistance for Needy Families  
13 (TANF), or Medicaid. If the customer applies at the telephone company, he or she  
14 must make an additional trip to the DSS/DHHS office for certification. Once  
15 DSS/DHHS certifies that the customer is eligible for one or more of the support  
16 programs, the agency submits the certified application to the telephone company  
17 for processing.

18 The second step is the on-going verification process. This process involves the  
19 participating companies submitting electronic files of Lifeline participants to the  
20 Office of Research and Statistics for comparison to DSS and DHHS client files.  
21 Using the Office of Research and Statistics is an efficient way for the companies to  
22 validate their information while protecting the customers pursuant to HIPAA  
23 privacy requirements. It is my understanding that as of January 2005, all

1 companies participating in the Lifeline Eligibility Verification Process are  
2 submitting their data to the Office of Research and Statistics for validation.

3 **Q. PLEASE DISCUSS YOUR FINDINGS CONCERNING ELIGIBILITY**  
4 **REQUIREMENTS FOR LIFELINE AND LINK-UP.**

5 A. In Order No. 87-1343 which created the Link-up Program, the Commission  
6 established participation in certain subsistence programs as the eligibility criteria  
7 for receiving Link-up benefits. Subsequently, the Commission adopted these same  
8 programs as eligibility criteria for the Lifeline program. These programs include  
9 TANF, Food Stamps and Medicaid. Each of these programs has different, but  
10 narrowly defined, income requirements as specified in the FCC rules and  
11 regulations, 47 C.F.R. 54.409. (See Exhibit KCM-2). Eligibility for Food Stamps  
12 is 130% of the Federal Poverty Guidelines (FPG), and eligibility for TANF is 50%  
13 of the FPG. Medicaid eligibility is based on the specific program being provided.  
14 For example, pregnant women and children up to one year of age may be eligible  
15 for benefits if their income is up to 185% of the FPG, children may qualify if their  
16 family income is up to 150% of the FPG, and seniors may qualify for limited  
17 benefits at 133% of FPG. Most other Medicaid programs are provided if the  
18 applicant's income is at or below 100% of the FPG. There are no additional  
19 independent income eligibility criteria for Lifeline and Link-up established by the  
20 Commission.

21 The federal government has established the following as eligibility criteria for those  
22 states not having a state-approved Lifeline program. The FCC regulations state,  
23 "To qualify to receive Lifeline service in a state that does not mandate state Lifeline

1 support, a consumer's income... must be at or below 135% of the Federal Poverty  
2 Guidelines or a consumer must participate in one of the following federal  
3 assistance programs: Medicaid; Food Stamps; Supplemental Security Income;  
4 Federal Public Housing Assistance (Section 8); Low-Income Home Energy  
5 Assistance Program; National School Lunch Program's free lunch program; or  
6 Temporary Assistance for Needy Families." In addition, the FCC's April 29, 2004  
7 order issued pursuant to WC Docket No. 03-109, encouraged ALL states, including  
8 those states with their own eligibility criteria, to adopt the income based criteria of  
9 135% of the Federal Poverty level.

10 **Q. HOW DOES THE DIFFERENCE BETWEEN THE SOUTH CAROLINA**  
11 **LIFELINE ELIGIBILITY CRITERIA AND THE FEDERAL LIFELINE**  
12 **ELIGIBILITY CRITERIA RELATE TO THE IMPLEMENTATION OF**  
13 **THE CONSENT ORDER BETWEEN BELL SOUTH AND THE**  
14 **CONSUMER ADVOCATE?**

15 A. In the consent order, BellSouth agreed to "provide Lifeline credits to its end user  
16 customers who are at or below 125% of the federal poverty level if an agency of the  
17 State of South Carolina accepts applications from BellSouth end user customers  
18 seeking Lifeline credits under this criteria and confirms to BellSouth that such end  
19 user customers are actually at or below 125% of the federal poverty level." Order  
20 Recommending Acceptance of Agreement, Appendix A at 3, ¶ 5, Consumer  
21 Advocate v. South Carolina Public Service Commission, Case No. 00-CP-40-2935  
22 (5<sup>th</sup> Cir. S.C., May 19, 2004).

1 Since South Carolina determines eligibility strictly by participation in an approved  
2 subsistence program, there is no independent process available for verification that  
3 customers are at or below a certain income level. Therefore, a process must be  
4 established to make such a determination in order for BellSouth to comply with this  
5 order. In its letter to the Commission dated December 15, 2004, ORS proposed to  
6 serve in this role.

7 **Q. IN THE DECEMBER 15, 2004 LETTER, ORS NOT ONLY PROPOSED TO**  
8 **SERVE IN THE ROLE OF INTAKE COORDINATOR, BUT ALSO**  
9 **SUGGESTED THAT AN OUTREACH COORDINATOR MAY BE**  
10 **APPROPRIATE. PLEASE EXPLAIN.**

11 **A.** After discussions with DSS, DHHS, and the Lieutenant Governor's Office on  
12 Aging, I have determined that there is very little outreach effort for the Lifeline  
13 program in the local county offices. It is certainly not that the agencies lack the  
14 desire to reach out to their clients about this program; it is simply a matter of staff  
15 time and knowledge. Recent budget cuts have impacted these agencies  
16 tremendously. Reductions in force and staff turnover have resulted in caseworkers  
17 who are unfamiliar with the program or who may not take the opportunity to  
18 inform their clients about the program.

19 There was also concern expressed by the agencies that some eligible consumers  
20 may not be participating in the program because they have not filed for the  
21 approved subsistence programs. This is especially true for our elderly population  
22 who may participate in Medicare but fail to apply for Medicaid benefits for which

1        they are eligible. This may be a growing problem since South Carolina ranks ninth  
2        in the United States for increases in its senior population.

3        **Q.    IN ORS' DECEMBER 15, 2004 LETTER, ORS ALSO DISCUSSED THE**  
4        **POTENTIAL FOR INCREASED PARTICIPATION IN THE LIFELINE**  
5        **PROGRAM. DO YOU HAVE ADDITIONAL INSIGHT INTO THE**  
6        **POTENTIAL EXPANSION OF THE ELIGIBILITY REQUIREMENTS OR**  
7        **OF AN OUTREACH PROGRAM?**

8        A.    Yes. In its proceedings on the federal Lifeline program, the FCC conducted a study  
9        on what impact changing the eligibility requirement from 100% of FPG to 135%  
10       FPG would have on the number of participants in the program. The FCC's findings  
11       are listed as Exhibit KCM-3. In this report, the FCC considered the number of  
12       households in South Carolina that would be eligible for Lifeline if South Carolina  
13       used an income based criteria of 100% of FPG. The FCC determined that 249,100  
14       would be eligible (based on 2000 data); however, only 8% of those households  
15       actually participated in the program. Other states had varying levels of  
16       participation. Of households at 100% of poverty level, an average of 37.5%  
17       participated in the program. Certainly, South Carolina should strive to meet the  
18       national average of participation in the Lifeline program.

19       **Q.    WHAT IMPACT WOULD AN INCREASED PARTICIPATION IN THE**  
20       **LIFELINE PROGRAM HAVE ON THE ILECs?**

21       A.    One of the concerns expressed by the carriers is the delay they experience in  
22       receiving reimbursement from the state USF for Lifeline participants. Because the  
23       State USF guidelines only require an annual true-up, it may be up to a year before

1 the companies receive reimbursement from the program expansion. The  
2 Commission may want to consider modifying the existing USF guidelines to enable  
3 a true-up for Lifeline to occur more frequently than once per year.

4 **Q. BASED ON THE ADDITIONAL INFORMATION YOU HAVE**  
5 **GATHERED, DO YOU HAVE ANY CHANGES TO YOUR ORIGINAL**  
6 **PROPOSAL TO THE COMMISSION?**

7 A. Yes. Since the original submission, ORS has learned of the computerized process  
8 used for verification of continuing eligibility that was coordinated between the  
9 companies, DSS, DHHS, and the Office of Research and Statistics. Because this  
10 program is in place, we would remove the request for \$15,000 for computer  
11 programming. In addition, we would reduce the amount of contractual services  
12 listed under the Outreach Coordinator from \$70,000 to \$35,000. Thus, we would  
13 revise the original request from \$263,543 to \$203,543.

14 If the Commission decides that an intake coordinator role is one that ORS should  
15 assume, we will work with BellSouth in devising an income verification program  
16 that would be acceptable to all parties. Hopefully we can build upon the  
17 collaborative process already established by the companies and the state agencies  
18 currently involved in this process.

19 Likewise, if the Commission decides that Lifeline outreach is a role for ORS, we  
20 will work with both the companies and the social service agencies to expand the  
21 awareness of the Lifeline program in South Carolina.

22 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

23 A. Yes, it does.

## New Lifeline Eligibility Verification Procedure Effective January 1, 2004

New eligibility verification process for telephone customers applying for Lifeline Discounted Telephone Rate after January 1, 2004. Existing Lifeline customers are not affected.

SC Medicaid eligibility has been transferred to DHHS from DSS. Food Stamp & TANF programs continue at DSS.

- I - Telcos are required to sign Memos of Understanding with DHHS.  
(DSS Contracts are already on file. There may be some Telcos who don't have a contract with DSS, who will need to execute such.)
- II - Telcos contact their local DSS & DHHS offices to arrange for completion of the authorization form. State agencies retain one copy and send duplicate to Telco after certification. Telco and state agencies must maintain records.
- III - After January 1, 2004 Telcos send Lifeline Customer lists to ORS for verification.

Continued...

RECEIVED  
2005 MAR 23 PM 4: 52  
SC PUBLIC SERVICE  
COMMISSION

## **Lifeline Application Process**

- 1) Customer completes Lifeline Authorization Form at either Telco or DSS or DHHS local offices.
- If Customer at Telco office –
  - Customer takes Authorization to local DSS or DHHS office for certification. (List of County Offices – attached)
    - Food Stamps/TANF - **DSS**.
    - Medicaid - **DHHS**.
- DSS & or DHHS certifies Authorization & transmits copy (Fax, Email, US Postal Svc.) to Telco.
  - DSS Clients eligible for Lifeline via
    - Food Stamps - eligibility is 130% FPG
    - Temporary Assistance for Needy Families TANF – 50%FPG
  - DHHS Clients eligible for Lifeline via
    - Medicaid – 150% FPG – adults W kids. 100% FPG – adults.
- If Customer at DSS/DHHS office –
  - Customer completes application, agency certifies, agency transmits copy of certified application to Telco.

V - Certified customer receives Lifeline rate as long as recipient of Food Stamps, TANF or Medicaid. Ongoing customer eligibility verified by DSS and or DHHS.

## **Ongoing Lifeline Verification**

State Office of Research & Statistics maintains client database for both DSS & DHHS.

Previous data transmittal methods continue except for the changes, effective January 1, 2004, noted below.

## **Ongoing Verification Process**

- 1) Telco prepares electronic file.
  - CD-Roms (preferred) or diskettes.  
*(ORS can read 3490 cartridges but CDs are preferred.)*
- 2) Telcos mail CDs to ORS at address below.

For Lifeline, c/o Diana Tester  
Office of Research & Statistics  
1919 Blanding Street  
Columbia, SC 29201

- 3) ORS compares Telco Lifeline Customer list with DSS & DHHS records. ORS Flags names of Food Stamp, TANF & Medicaid clients as eligible for Lifeline Rate to continue. Unflagged names are no longer eligible.
- 4) ORS sends Telco list to DHHS which mails CD back to Telco.
- 5) Telco notifies ineligible customers they will no longer receive Lifeline rate.

## Federal Communications Commission

§ 54.409

tariffed (or otherwise generally available) residential rate for the services enumerated in § 54.101(a)(1) through (a)(9), and charge Lifeline consumers the resulting amount.

(c) Lifeline support for providing toll limitation shall equal the eligible telecommunications carrier's incremental cost of providing either toll blocking or toll control, whichever is selected by the particular consumer.

[62 FR 32948, June 17, 1997, as amended at 63 FR 2128, Jan. 13, 1998; 65 FR 38689, June 21, 2000; 65 FR 47905, Aug. 4, 2000]

**§ 54.405 Carrier obligation to offer Lifeline.**

All eligible telecommunications carriers shall:

(a) Make available Lifeline service, as defined in § 54.401, to qualifying low-income consumers, and

(b) Publicize the availability of Lifeline service in a manner reasonably designed to reach those likely to qualify for the service.

(c) Notify Lifeline subscribers of impending termination of Lifeline service if the carrier has a reasonable basis to believe that the subscriber no longer meets the Lifeline-qualifying criteria, as described in § 54.409. Notification of impending termination shall be in the form of a letter separate from the subscriber's monthly bill. A carrier providing Lifeline service in a state that has dispute resolution procedures applicable to Lifeline termination, that requires, at a minimum, written notification of impending termination, must comply with the applicable state requirements.

(d) Allow subscribers 60 days following the date of the impending termination letter required in paragraph (c) of this section in which to demonstrate continued eligibility. Subscribers making such a demonstration must present proof of continued eligibility to the carrier consistent with applicable state or federal verification requirements, as described in § 54.410(c). Carriers must terminate subscribers who fail to demonstrate continued eligibility within the 60-day time period. A carrier providing Lifeline service in a state that has dispute resolution procedures applicable to Lifeline termi-

nation must comply with the applicable state requirements.

[65 FR 47905, Aug. 4, 2000, as amended at 69 FR 34600, June 22, 2004]

EFFECTIVE DATE NOTE: At 69 FR 34600, June 22, 2004, § 54.405, paragraphs (c) and (d) were added. These paragraphs contain information collection and recordkeeping requirements and will not become effective until approval has been given by the Office of Management and Budget.

**§ 54.407 Reimbursement for offering Lifeline.**

(a) Universal service support for providing Lifeline shall be provided directly to the eligible telecommunications carrier, based on the number of qualifying low-income consumers it serves, under administrative procedures determined by the Administrator.

(b) The eligible telecommunications carrier may receive universal service support reimbursement for each qualifying low-income consumer served. For each consumer receiving Lifeline service, the reimbursement amount shall equal the federal support amount, including the support amount described in § 54.403(c). The eligible telecommunications carrier's universal service support reimbursement shall not exceed the carrier's standard, non-Lifeline rate.

(c) In order to receive universal service support reimbursement, the eligible telecommunications carrier must keep accurate records of the revenues it forgoes in providing Lifeline in conformity with § 54.401. Such records shall be kept in the form directed by the Administrator and provided to the Administrator at intervals as directed by the Administrator or as provided in this Subpart.

**§ 54.409 Consumer qualification for Lifeline.**

(a) To qualify to receive Lifeline service in a state that mandates state Lifeline support, a consumer must meet the eligibility criteria established by the state commission for such support. The state commission shall establish narrowly targeted qualification criteria that are based solely on income or factors directly related to income. A state containing geographic

SC PUBLIC SERVICE  
COMMISSION

RECEIVED

areas included in the definition of “reservation” and “near reservation,” as defined in § 54.400(e), must ensure that its qualification criteria are reasonably designed to apply to low-income individuals living in such areas.

(b) To qualify to receive Lifeline service in a state that does not mandate state Lifeline support, a consumer’s income, as defined in § 54.400(f), must be at or below 135% of the Federal Poverty Guidelines or a consumer must participate in one of the following federal assistance programs: Medicaid; Food Stamps; Supplemental Security Income; Federal Public Housing Assistance (Section 8); Low-Income Home Energy Assistance Program; National School Lunch Program’s free lunch program; or Temporary Assistance for Needy Families.

(c) A consumer that lives on a reservation or near a reservation, but does not meet the qualifications for Lifeline specified in paragraphs (a) and (b) of this section, nonetheless shall be a “qualifying low-income consumer” as defined in § 54.400(a) and thus an “eligible resident of Tribal lands” as defined in § 54.400(e) and shall qualify to receive Tiers One, Two, and Four Lifeline service if the individual participates in one of the following federal assistance programs: Bureau of Indian Affairs general assistance; Tribally administered Temporary Assistance for Needy Families; Head Start (only those meeting its income qualifying standard); or National School Lunch Program’s free lunch program. Such qualifying low-income consumer shall also qualify for Tier-Three Lifeline support, if the carrier offering the Lifeline service is not subject to the regulation of the state and provides carrier-matching funds, as described in § 54.403(a)(3). To receive Lifeline support under this paragraph for the eligible resident of Tribal lands, the eligible telecommunications carrier offering the Lifeline service to such consumer must obtain the consumer’s signature on a document certifying under penalty of perjury that the consumer receives benefits from at least one of the programs mentioned in this paragraph or paragraph (b) of this section, and lives on or near a reservation, as defined in § 54.400(e). In addition to identifying in that document

the program or programs from which that consumer receives benefits, an eligible resident of Tribal lands also must agree to notify the carrier if that consumer ceases to participate in the program or programs. Such qualifying low-income consumer shall also qualify for Tier-Three Lifeline support, if the carrier offering the Lifeline service is not subject to the regulation of the state and provides carrier-matching funds, as described in § 54.403(a)(3).

(d) In a state that does not mandate state Lifeline support, each eligible telecommunications carrier providing Lifeline service to a qualifying low-income consumer pursuant to paragraphs (b) or (c) of this section must obtain that consumer’s signature on a document certifying under penalty of perjury that:

(1) The consumer receives benefits from one of the programs listed in paragraphs (b) or (c) of this section, and identifying the program or programs from which that consumer receives benefits, or

(2) The consumer’s household meets the income requirement of paragraph (b) of this section, and that the presented documentation of income, as described in §§ 54.400(f), 54.410(a)(ii), accurately represents the consumer’s household income; and

(3) The consumer will notify the carrier if that consumer ceases to participate in the program or programs or if the consumer’s income exceeds 135% of the Federal Poverty Guidelines.

[65 FR 47905, Aug. 4, 2000, as amended at 68 FR 41942, July 16, 2003; 69 FR 34600, June 22, 2004]

EFFECTIVE DATE NOTE: At 69 FR 34600, June 22, 2004, § 54.409 paragraph (d) was added. This paragraph contains information collection and recordkeeping requirements and will not become effective until approval has been given by the Office of Management and Budget.

**§ 54.410 Certification and Verification of Consumer Qualification for Lifeline.**

(a) *Certification of income.* Consumers qualifying under an income-based criterion must present documentation of their household income prior to enrollment in Lifeline.

## Executive Summary Lifeline Staff Analysis April 2003

### Introduction

The Federal-State Joint Board on Universal Service (Joint Board) recommends that the Federal Communications Commission (FCC) add a federal default income-based criterion of at least 1.35 times the Federal Poverty Guidelines — a 1.35 Poverty Level Criterion (PLC). This would allow many additional low-income citizens in those states that utilize the federal default criteria to take the Lifeline program. The Joint Board also recommends that the FCC encourage all states to adopt the recommended federal income-based criteria.

There is a benefit to increasing the number of participants, and also a cost. The obvious benefit would be the increase in the number of telephone subscribers. The cost at the federal level would be the additional federal dollars spent on the additional Lifeline enrollees.

### Methodology

This study uses the economic method of forecasting baseline, change and new policy impact. This means that first we estimate the number of Lifeline subscribers and the costs of the program to form the baseline, also known as the status quo. Second, we estimate the changes that would result from a nationwide implementation of a 1.35 PLC, assuming that all states adopt this criterion.<sup>1</sup> Third, we add (or apply) the changes to the baseline to the time period when the policy is expected to be implemented. This step provides an estimate of the number of Lifeline subscribers and costs under the new policy. We have chosen to estimate the baseline and changes for 2004 because that is the timeframe in which the proposed changes will likely be made.

This study uses a combination of statistical regression analysis and simple math in a series of spreadsheet tables. The following equations form the basic structure of the spreadsheet model.

New Lifeline households = New Lifeline-eligible households times predicted Lifeline subscription rate among newly-eligible households.

Additional federal Lifeline expenditures = number of additional households that would take Lifeline times the amount of federal expenditures per household that takes Lifeline.

---

<sup>1</sup> Some states have a 1.5 PLC. This study assumes that those states with a 1.5 PLC keep it.

In sum, the results of two regression models are used to predict the impact of a policy change, and these predictions are applied to the baseline to calculate the new level of Lifeline subscription and federal Lifeline expenditures.

## Results

The results are summarized below:

### Summary information for 2004 if states adopted a 1.35 PLC:

**Additional households that would take Lifeline:** 967,000 to 1,136,000

Of the additional Lifeline subscribers, the number that  
would subscribe to telephone service because of the 1.35 PLC: 259,000

Of the additional Lifeline subscribers, the number that  
would already have telephone service: 708,000 to 877,000

### **Additional federal expenditures in 2004:**

Amount that federal expenditures would increase \$105,000,000 to \$123,000,000

Additional federal expenditures per new telephone subscriber: \$405 to \$475

## Lifeline Staff Analysis

### Introduction

States use different criteria for determining whether a household qualifies for Lifeline. Some states use the federal eligibility criteria (set by the FCC), which enable households receiving Federal Public Housing Assistance (Section 8), Food Stamps, Low-Income Home Energy Assistance Program, Medicaid, or Supplemental Security Income to receive Lifeline. Other states have set their own criteria. States setting their own criteria often use one or more of the programs from the federal criteria and sometimes include one or more of their own state-wide programs. Some states also use an income-based criterion, which is based on some multiple of the Federal Poverty Guidelines. In all cases, a household need meet only one of a state's criteria to be eligible for Lifeline.

The Joint Board recommends that the FCC add an income-based criterion to the federal eligibility criteria for Lifeline. The Joint Board also recommends that the income-based criterion be set at 1.35 times the Federal Poverty Guidelines. Thus, households with incomes at or below 1.35 times the Federal Poverty Guidelines would be eligible for Lifeline.

This study assumes that all states (not just those that currently utilize the federal default criteria) add an income-based criterion of at least 1.35 times the Federal Poverty Guidelines (poverty level)—a 1.35 Poverty Level Criterion (PLC)—which would increase the overall number of eligible households.<sup>2</sup> This would enable additional low-income citizens in many states to take the Lifeline program. (Households meeting at least one eligibility criterion are eligible for Lifeline, so adding an additional eligibility criterion increases the number of households that are eligible for Lifeline.)

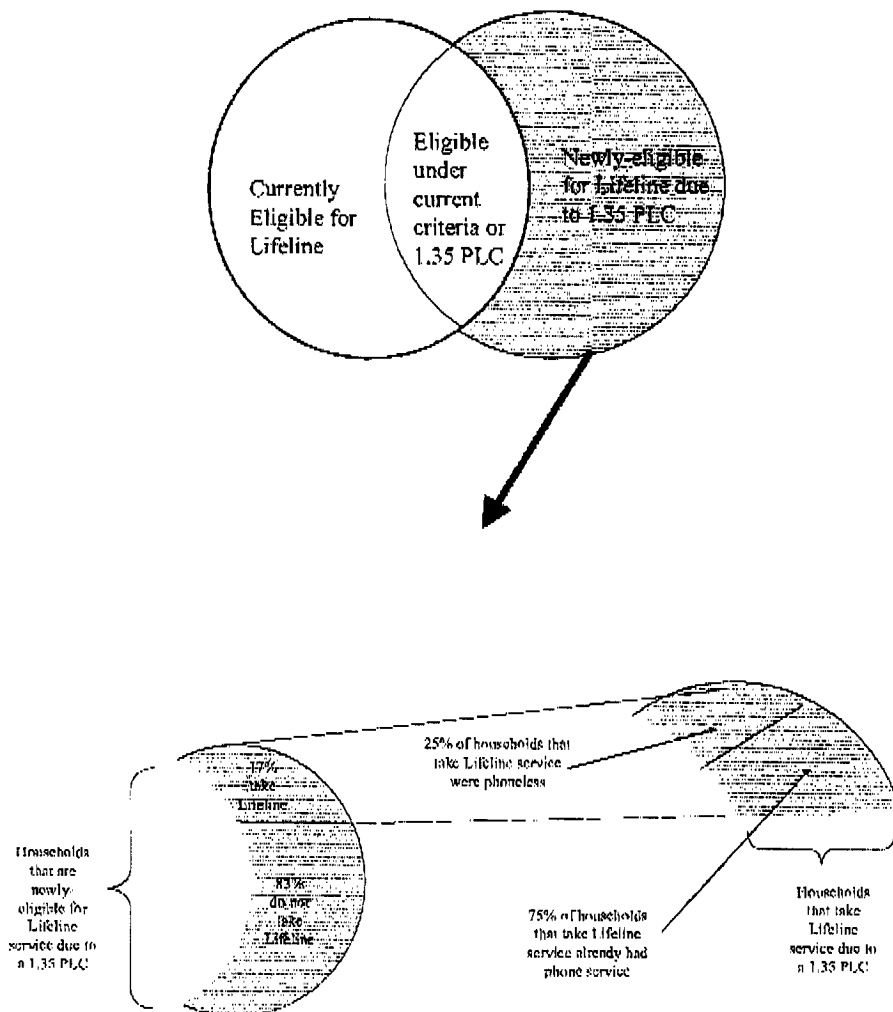

There is a benefit to increasing the number of participants, and also a cost. The obvious benefit would be the increase in the number of telephone subscribers. The cost at a federal level would be the additional federal dollars spent on the additional Lifeline enrollees. Because the study assumes that all states choose to adopt the recommended federal income-based eligibility criteria, the estimates presented are likely to represent the upper limit of potential new Lifeline and telephone subscribers and estimated impact on the fund. If some states choose not to adopt the federal income-based standard, the number of new Lifeline and telephone subscribers, and additional cost would be correspondingly lower.

The relationship between Lifeline eligibility, Lifeline subscribership, and telephone subscribership is as follows. A portion of newly-eligible households (because of a 1.35 PLC) will take Lifeline service. Of those households that subscribe to Lifeline because of the 1.35 PLC, a portion will start taking telephone service because they would then qualify for Lifeline. The other portion would already have telephone service, and would be taking the Lifeline just because they are newly-eligible. See the graphs below.

---

<sup>2</sup> This study assumes throughout that states with a 1.5 PLC continue to use a 1.5PLC.

Lifeline Eligibility with a 1.35 PLC,  
households taking Lifeline, and households  
taking telephone service due to a 1.35 PLC

## Methodology Summary

This study uses the economic method of forecasting baseline, change and new policy impact. This means that first we estimate the number of Lifeline subscribers and the federal expenditures of the program to form the baseline numbers. Second, we estimate the changes that would result from a nationwide implementation of a 1.35 PLC. Third, we add (or apply) the changes to the baseline in the time period when the policy is expected to be implemented. This step provides an estimate of the number of Lifeline subscribers and costs under the new policy.

For the first step, we estimate Lifeline subscribership in Year 2000 and update those estimates using data for Year 2002. The 2002 estimates are used as a base from which to forecast 2004 baseline Lifeline subscribership. We have chosen to estimate the baseline and changes for 2004 because that is the timeframe in which the proposed changes will be made.

For the second step, the Year 2000 subscribership estimates are used to predict the change in Lifeline subscribership due to a 1.35 PLC. The study uses the plethora of demographic data available from the Year 2000 to model the effects that a 1.35 PLC would have had on Lifeline subscribership and telephone penetration in 2000. For Lifeline subscribership, a regression model is constructed that predicts the increase in Lifeline subscribers as a function of increasing multiples of the Federal Poverty Guidelines. For example, the model predicts that if Texas—which has a 1.25 PLC—adopted a 1.35 PLC, Lifeline subscribers in 2004 would increase by 16,669 to 19,576 (See Table 2.F). For telephone subscribership, a logistic regression is constructed that predicts the increase in telephone subscribership as a function of increasing multiples of the Federal Poverty Guidelines and other important factors, such as income and home ownership. If all states adopt a 1.35 (or higher) PLC for Lifeline, the model predicts that 259,000 households would take telephone service because of that change.

In the third step, the estimated additional number of Lifeline subscribers is added to the baseline in Year 2004 to get the forecasted number of Lifeline subscribers that would exist in 2004 under a nationwide implementation of the new policy. This study forecasts the additional Lifeline subscribers that would result from the implementation of a 1.35 PLC (baseline plus change).

These steps are exhibited in the following graphs. The first graph shows the steps for predicting the number of Lifeline subscribers, and the second graph shows the amount of federal Lifeline expenditures.

## Modeling Process

The modeling process is outlined below. The word “produce” is used below when the FCC did not have the actual data, and so the quantities were estimated based on a sound methodology. The word “forecast” is used when data are predicted for a future time period.

- Create baseline
  - Produce baseline Lifeline subscription rates for 2000.
  - Produce baseline Lifeline subscription rates for 2002.
  - Forecast baseline Lifeline subscription rates for 2004.
  - Forecast baseline federal Lifeline expenditures for 2004.
- Estimate change from new policy
  - Produce change to Lifeline eligibility resulting from a 1.35 PLC.
  - Forecast change to Lifeline subscription rates in 2000 resulting from a 1.35 PLC.
  - Forecast change to Lifeline subscription rates for 2004.
  - Forecast for Years 2000 and 2004, change to telephone subscribership resulting from a 1.35 PLC.
  - Forecast change to federal Lifeline expenditures for 2004.
- Apply new policy to baseline to compute new level
  - Apply forecasted changes to forecasted baseline to determine the new number of Lifeline subscribers in 2004.
  - Apply forecasted changes to forecasted baseline to determine the new federal Lifeline expenditures in 2004.

## Methodology Detail

The above steps will now be discussed in more detail. A series of tables is constructed that show the computations for the three steps outlined above.

This study combines data from three sources: 1) Current Population Survey of Households (CPSH) provided by the Bureau of Labor Statistics; 2) the website [www.lifelinesupport.org](http://www.lifelinesupport.org); and 3) Universal Service Administrative Company (USAC). The CPSH data contain the results from over 50,000 households that were surveyed around January 2000. The website [www.lifelinesupport.org](http://www.lifelinesupport.org) provides the Lifeline eligibility requirements for each state, and USAC's website provides actual Lifeline subscribers in 2000 and 2002.

This study uses a combination of statistical regression analysis and simple math in a series of spreadsheet tables. Two regression models are constructed.

- Lifeline Regression Model - A regression analysis model is constructed that correlates higher Lifeline subscription rates to the use of higher multiples of the Federal Poverty Guidelines for income criteria. Many states have income-based Lifeline eligibility criteria, and in general, the states with a higher multiple of the Federal Poverty Guidelines have higher Lifeline subscription rates. The results from this model are then used to predict the number of households that would take Lifeline in 2000 and 2004 as a result of a nationwide implementation of a 1.35 PLC.

- **Telephone Regression Model** - Another regression model, this time a logistic regression, is used to predict increased telephone participation that would have resulted in 2000 had a 1.35 PLC been implemented. This model incorporates several factors, including the 1.35 PLC, income, and other demographic information. Many states have income-based Lifeline eligibility criteria, and in general, the states with a higher multiple of the Federal Poverty Guidelines have higher telephone subscription rates. The results from this model are then used to determine the number of households that would take telephone service in 2004 as a result of a nationwide implementation of a 1.35 PLC.

The spreadsheet tables use a series of equations which simply add or multiply the contents of various columns in the table to produce a final column (to the right) which is of the most interest. The results of the regression analysis are incorporated into several columns in the tables. The following equations are used in the tables:

- **Number of additional households taking Lifeline** = number of newly-eligible households times the Lifeline subscription rate (the percentage of those households that would take Lifeline, which is determined by the Lifeline Regression Model).
- **Additional federal Lifeline expenditures** = number of additional households that would take Lifeline times the amount of federal expenditures per household that takes Lifeline.

In sum, the results of two regression models are used to predict the impact of a policy change, and these predictions are applied to the baseline to calculate the new level. The data and analysis is discussed in more detail below.

## Step 1: Create Baseline

The tables in this section examine the number of Lifeline subscribers, the number of households that are eligible for Lifeline and the Lifeline subscription rate. Each table reflects data for a different year.

*Baseline Lifeline subscription rates for Year 2000.* Nationally, 16.3% of households are estimated to be eligible for Lifeline. Of these eligible households, an estimated 33.1% subscribe to Lifeline.

The CPSH data contain demographic data from which the eligibility for each household in the sample can be determined. So, if a state uses Food Stamps as an eligibility criterion, then those households in that state that received Food Stamps are marked as being eligible for Lifeline. Each household is analyzed according to its state's eligibility criteria, as reported by [www.lifelinesupport.org](http://www.lifelinesupport.org).<sup>3</sup> Only those households that meet at least one of the eligibility criteria are deemed eligible for Lifeline, the rest are deemed ineligible. This is accomplished electronically using Visual Basic for Applications for Microsoft Access. From these data, statewide estimates for the number of Lifeline eligible households are created. USAC data from the *Monitoring Report* are then used to create the Lifeline subscription rate, which is the percentage of eligible households that subscribe to Lifeline. See Table 1.A.

*Baseline Lifeline subscription rates for 2002.* Nationally, 16.3% of households are estimated to be eligible for Lifeline. Of these households, an estimated 37.5% subscribe to Lifeline.

USAC Lifeline data from 2002 are used to create a new baseline subscribership rate, using the same methodology as for Year 2000 described above. The number of households in each state in Year 2002 is forecasted based on the growth rate of households between 1998 and 2000. It is assumed that the same percentage of households that qualified for Lifeline in 2000 qualified for Lifeline in 2002. See Table 1.B.

*Forecasted Baseline Lifeline subscription rates for 2004.* There will be an estimated 110.1 million households in the Year 2004, and 6.8 million of those households are expected to take Lifeline under existing rules.

The results from the previous tables are used to forecast the number of households, the number of Lifeline-eligible households, and the number of Lifeline subscribers in 2004. The number of households in 2004 is calculated in the same manner as it was in Table 1.B. The number of households qualifying for Lifeline in 2004 (July 1, 2004, to be exact) is simply calculated by multiplying the percentage of all households that are eligible for Lifeline in 2000 by the forecasted number of households in 2004. This calculation assumes that the same percentage of households will qualify for Lifeline in 2004 as did in 2000. The number of households that would take Lifeline in 2004 is calculated by multiplying the percentage of eligible households that took Lifeline in 2002 by the forecasted number of eligible households in 2004. This calculation assumes that the same percentage of Lifeline-eligible households will take Lifeline in

---

<sup>3</sup> The website was viewed in early 2002.

2004 as did in 2002. These predictions make two implicit assumptions: the number of households in each state increases at a constant rate, and the economy continues to grow at the same rate it did in 2002. See Table 1.C.

*Forecasted Baseline federal Lifeline expenditures for 2004.* Forecasted federal Lifeline expenditures under existing rules in Year 2004 are \$709 million.

The forecasted federal Lifeline expenditures are calculated by multiplying the forecasted number of Lifeline subscribers in each state times the expected federal expenditures per line in that state. The state-by-state federal expenditures are then summed to form the national total. See Table 1.D.

#### Step 2: Estimate Change from New Policy

This section quantifies the number of additional households that would become eligible for Lifeline, the number of households that would subscribe to Lifeline, and the number of additional households that would subscribe to telephone service due to the implementation of a 1.35 PLC. (This analysis assumes that states without a PLC for Lifeline and states with a PLC below 1.35 adopt a 1.35 PLC. This analysis also assumes that states with a 1.5 PLC keep it.) This section then calculates the increased federal Lifeline expenditures resulting from the increased number of households taking Lifeline due to the 1.35 PLC. CPSH data are used to determine the number of additional households that would become eligible for Lifeline. Two regression analyses are used to determine the number of additional households that would subscribe to Lifeline and the number of households that would take telephone service due to a 1.35 PLC.

*Change to Lifeline eligibility in 2000 and 2004 resulting from a 1.35 PLC.* We predict that an additional 6.1 percent of total households would qualify for Lifeline under the 1.35 PLC, and this would qualify an additional 6.6 million households in Year 2004.

The demographic data from each household in the CPSH data are examined to determine whether it would have become eligible for Lifeline with a 1.35 PLC. The estimates from the CPSH data are then used to determine the number of households in each state that would become eligible for Lifeline with a 1.35 PLC. Table 2.A presents the information for the Year 2000 and 2.B presents the information for the Year 2004.

*Change to Lifeline subscribership in 2000 resulting from a 1.35 PLC.* We predict that states without a PLC and states with PLCs at 1.25 or lower would see a significant increase in the number of low-income households that take Lifeline if they adopted a 1.35 PLC. Nationwide, the number of Lifeline takers would increase between 928,000 to 1,090,000 if all states adopted a 1.35 PLC.

Different states have different Lifeline eligibility criteria, so regression analysis can be employed to quantify the correlation between the use of a higher multiple of the poverty level (i.e., a higher PLC) and the resulting higher Lifeline subscription rate. The Lifeline Regression Model predicts increased Lifeline subscribership that would have resulted from a nationwide 1.35 PLC in 2000.

See Tables 2.C and 2.D. (At the end of this study is a technical appendix that more thoroughly discusses the regression analysis used for this model.) Tables 2.E and 2.F show the number of additional Lifeline subscribers on a state-by-state basis for 2000 and 2004.

*Forecasted change to telephone subscribership for 2004.* We predict that if all states adopted a 1.35 PLC, 259,000 households that do not have telephone service would take telephone service.

The Telephone Regression Model uses logistic regression to predict the increased telephone subscribership that would have resulted from a nationwide 1.35 PLC in 2000. See Tables 2.G and 2.H. (At the end of this study is a technical appendix that more thoroughly discusses the logistic regression analysis used for this model.) Table 2.H also uses these results to quantify the number of households that would take telephone service in 2000 and 2004 because of a 1.35 PLC.

For 2000 and 2004 respectively, Tables 2.I and 2.J. break down the number of new Lifeline subscribers into two groups: those that would be taking telephone service because of the 1.35 PLC, and those that are already had telephone service, and who are subscribing to Lifeline just because they would then be eligible for it.

*Change to federal Lifeline expenditures for 2004 is forecasted.* We predict that federal Lifeline expenditures would increase by \$105 million to \$123 million if all states implemented a 1.35 PLC.

The forecasted change to federal Lifeline expenditures is calculated by multiplying the forecasted change to the number of Lifeline subscribers in each state times the expected federal expenditures per Lifeline subscribers in that state. The state-by-state change in the amount of federal expenditures is then summed to form the national total. See Table 2.K.

### Step 3: Apply New Policy to Baseline to Compute New Level

The new levels of subscribership and costs are shown in several tables. First, the new total of Lifeline subscribers is calculated, and then the increased federal Lifeline expenditures are calculated.

*Forecasted New Policy Levels for Lifeline subscribership in 2004.* We predict that if all states implement a 1.35 PLC for Lifeline, an estimated 8 million households will subscribe.

Here the forecasted increase in Lifeline subscribers is added to the forecasted baseline number of subscribers to create the new forecasted number of Lifeline subscribers in 2004 with the 1.35 PLC. See Table 3.A.

*Forecasted New Policy Levels for federal Lifeline expenditures.* We predict that if all states implement a 1.35 PLC for Lifeline, federal Lifeline expenditures are forecasted to be in the range of \$814 million to \$832 million.

Here the forecasted increase in federal Lifeline expenditures is added to the forecasted baseline federal Lifeline expenditures to create the new forecasted federal Lifeline expenditures in 2004 with the 1.35 PLC. See Table 3.B.

#### Additional request

Finally, this study examines, at the Joint Board's request, the effects of replacing the current federal default Lifeline eligibility criteria with a single income-based criterion (Table 4.A). For administrative ease, the model assumes that all states (even those that do not presently utilize the federal default criteria) would adopt a single criterion of 1.35 PLC, except that states with a 1.5 PLC would keep it. Therefore, these estimates may overstate the results of the policy change. If current criteria were replaced with a 1.35 PLC, then some current Lifeline participants would no longer be eligible, so there would be decreases in Lifeline subscribership resulting from the discontinued criteria. There would also be offsetting increases from the new 1.35 PLC. The net impact is that fewer households would take Lifeline if the 1.35 PLC were the only eligibility criterion.

The calculations are as follows. The baseline number of households taking Lifeline is the same as calculated above in Section Three. CPSH data are examined to determine the percentage of households that would no longer qualify for Lifeline due to the removal of all other eligibility criteria. The number of newly-eligible households that would take Lifeline as a result of the 1.35 PLC criteria change is derived in Section Three. Thus, the new policy level of Lifeline subscribers is the baseline number of Lifeline subscribers less those subscribers that could not remain due to the change, plus those Lifeline subscribers that would take it because of the change. See Table 4.A.

#### Other Factors

This study cannot take several important factors into consideration, such as economic conditions and state outreach programs because there are not enough data to do so. Properly accounting for a fluctuating economy would require five or more decades of data. The Lifeline program started only about 20 years ago, so an analysis incorporating a fluctuating economy is not attempted in this study. Further, there are no comprehensive estimates quantifying state spending on outreach programs, or the effects the outreach programs have on Lifeline subscribership.

By not accounting for these factors explicitly, this study assumes that these factors will remain constant between 2000 and 2004. Although changes in these factors can affect the forecasted baseline number of Lifeline subscribers (and therefore, baseline federal expenditures), those factors should have a relatively smaller effect on the forecasted number of households that will take Lifeline as a result of a 1.35 PLC. The number of households that would take Lifeline because of a 1.35 PLC is about 1/6<sup>th</sup> of those that already take Lifeline. So, as the economy fluctuates, and more or less households take Lifeline, the number of households that would take Lifeline due to a 1.35 PLC will go up and down by 1/6<sup>th</sup> as much as the number of households that would take Lifeline based on other eligibility criteria. Thus, the number of households

taking Lifeline due to a 1.35 PLC will have  $1/36^{\text{th}}$  the variance that the number of households taking Lifeline will have.<sup>4</sup>

#### Additional assumptions

In addition to the factors discussed above, this study makes several assumptions that are needed to estimate the impact of the program:

1) All other Lifeline/Linkup eligibility criteria (and the qualifications for the underlying programs) stay constant over time. Aside from the addition of a 1.35 PLC, this model assumes that between 2000 and 2004, no other changes are made to the Lifeline/Linkup programs or to the programs that are frequently used as qualifying criteria for Lifeline between 2000 and 2004;

2) Data can be substituted. Several states have a 1.33 PLC in effect. This study treats states that have a 1.33 PLC as having a 1.35 PLC. This assumption is reasonable because the effects of a 1.33 PLC are statistically indistinguishable from a 1.35 PLC.

3) Rapid adoption and continuity. This model assumes that all states rapidly adopt a 1.35 PLC (and that states with a 1.5 PLC keep it). The model also assumes that households rapidly learn of the changes to the Lifeline program and expeditiously act on this new information.

## Results

The results are summarized below:

### **Summary information for 2004:**

#### **Household information:**

|                                                             |                        |
|-------------------------------------------------------------|------------------------|
| Forecasted households on Lifeline without 1.35 PLC:         | 6,827,000              |
| Forecasted additional households on Lifeline with 1.35 PLC: | 967,000 to 1,136,000   |
| Forecasted households on Lifeline with 1.35 PLC:            | 7,974,000 to 7,961,000 |

#### **Lifeline subscriber information:**

|                                                                   |                    |
|-------------------------------------------------------------------|--------------------|
| Households that would take telephone service due to the 1.35 PLC: | 259,000            |
| Households taking Lifeline that already have telephone service:   | 708,000 to 877,000 |

#### **Federal Lifeline expenditures:**

|                                                            |                                |
|------------------------------------------------------------|--------------------------------|
| Forecasted federal Lifeline expenditures without 1.35 PLC: | \$709,000,000                  |
| Forecasted amount federal expenditures would increase:     | \$105,000,000 to \$123,000,000 |
| Forecasted federal Lifeline expenditures with 1.35 PLC:    | \$814,000,000 to \$832,000,000 |

|                                                                      |                       |
|----------------------------------------------------------------------|-----------------------|
| <b>Additional federal expenditures per new telephone subscriber:</b> | <b>\$405 to \$475</b> |
|----------------------------------------------------------------------|-----------------------|

### Section Table Title

- |     |                                                                                                                                                     |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | Baseline information                                                                                                                                |
| 1.A | Baseline Lifeline subscription information (Year 2000)                                                                                              |
| 1.B | Baseline Lifeline subscription information (Year 2002)                                                                                              |
| 1.C | Baseline Lifeline subscription information (Year 2004)                                                                                              |
| 1.D | Forecasted baseline Lifeline expenditures (Year 2004)                                                                                               |
|     |                                                                                                                                                     |
| 2   | Change to baseline: effects from the new policy                                                                                                     |
| 2.A | Estimated additional Lifeline-eligible households using a nationwide 1.35 PLC (Year 2000)                                                           |
| 2.B | Estimated additional Lifeline-eligible households using a nationwide 1.35 PLC (Year 2004)                                                           |
| 2.C | Regression analysis: Would Lifeline take rates increase due to a nationwide implementation of a 1.35 PLC?                                           |
| 2.D | Estimated additional Lifeline subscribership with a nationwide 1.35 PLC                                                                             |
| 2.E | Estimated state-by-state additional Lifeline subscribers using a 1.35 PLC (Year 2000)                                                               |
| 2.F | Estimated state-by-state additional Lifeline subscribers using a 1.35 PLC (Year 2004)                                                               |
| 2.G | Logit regression results: Would a 1.35 Poverty Level Criterion for Lifeline increase telephone penetration?                                         |
| 2.H | Using the logit regression results: Calculating the number of households that would have taken telephone service with a nationwide 1.35 PLC in 2000 |
| 2.I | Breakdown of Lifeline subscribers with a nationwide 1.35 PLC (Year 2000)                                                                            |
| 2.J | Breakdown of Lifeline subscribers with a nationwide 1.35 PLC (Year 2004)                                                                            |
| 2.K | Estimated Lifeline expenditures (Year 2004)                                                                                                         |
|     |                                                                                                                                                     |
| 3   | New policy levels: new levels resulting from a 1.35 PLC (as of July 1, 2004)                                                                        |
| 3.A | Forecasted new Lifeline subscribers (Year 2004)                                                                                                     |
| 3.B | Forecasted new Lifeline expenditures (Year 2004)                                                                                                    |
|     |                                                                                                                                                     |
| 4   | Replacing current criteria with an income-based criterion.                                                                                          |
| 4.A | Estimated households taking Lifeline if 1.35 PLC were the only criterion                                                                            |

<sup>1</sup> Estimate of monthly federal expenditures includes the Subscriber Line Charge (SLC), \$1.75, and any federal matching funds for that state. SLC amounts were estimated on a company-by-company basis, and are based on rules established by the CALLS and MAG proceedings. The SLC for each state is a weighted average based on the number of Lifeline subscribers served by each carrier in the state.

Section 2: Change to baseline: effects from the new policy

Table 2.A

Estimated additional Lifeline-eligible households using a nationwide 1.35 PLC (Year 2000)

| State          | a (Table 1.A) | b (CPSH data)                                                            | c=b/a                                                           |
|----------------|---------------|--------------------------------------------------------------------------|-----------------------------------------------------------------|

|                                                                                                                         | Coefficient | Amount 1.35 PLC is above 1.25 | Increase in portion that would take Lifeline <sup>4</sup> |
| Low range:                                                                                                              | 0.582       | 0.1                           | 0.058                                                     |
| High range:                                                                                                             | 0.682       | 0.1                           | 0.068                                                     |
| A: The take rate would rise by 5.8 to 6.8 percentage points.                                                            |             |                               |                                                           |

Notes:

<sup>1</sup> The Lifeline take rate is the number of households that take Lifeline divided by the number of households with income at or below 1.5 times the poverty level. For more information on the regression, see Appendix 1.

<sup>2</sup> Significant at the 10% level in a two-tailed test.

<sup>3</sup> For instance, if a state has a 1.5 poverty level criterion, then the variable has a value of .25 (=1.5 - 1.25). If a state has no poverty level criteria, or if the state's poverty level criteria is at or below 1.25, then the variable has a value of 0.

<sup>4</sup> This means that if a state raised its PLC from 1.25 to 1.35, then, on average, the percentage of poor households that take Lifeline would rise by 6.8 percentage points. Similarly, on average, a state adding a 1.35 PLC where no PLC existed would increase its Lifeline take rate by 6.8 percentage points.

Q: Of the households that would become eligible to take Lifeline because of a 1.35 PLC, what percentage would do so only because of the 1.35 PLC?

|             | A (Column a, above)                                                    | B (Table 2.A)                                                           | C=A*B                                                                            |
|-------------|------------------------------------------------------------------------|-------------------------------------------------------------------------|----------------------------------------------------------------------------------|
|             | Additional households that would have taken Lifeline due to a 1.35 PLC | Additional households that would have become eligible due to a 1.35 PLC | Percentage of newly eligible households that would take Lifeline with a 1.35 PLC |
| Low range:  | 928,000                                                                | 6,368,000                                                               | 14.6%                                                                            |
| High range: | 1,090,000                                                              | 6,368,000                                                               | 17.1%                                                                            |

A: 14.6% to 17.1% of the households that would become eligible for Lifeline would subscribe.

Notes

<sup>1</sup> The regression analysis presented in Table 2.C examined Lifeline take rates among households with incomes at or below 1.5 times the federal poverty guidelines. This value includes households in states without a poverty level criterion for Lifeline.

<sup>2</sup> Assumes that states with a Lifeline criterion of 1.5 PLC do not change their criteria. Also assumes that states with 1.33 PLCs see no measurable effect from implementing a 1.35 PLC.

| <u>Conclusion:</u> Yes, the coefficient on "State has 1.35 or 1.5 poverty level criterion for Lifeline" is statistically significant. |                                    |                                 |                |                                            |

<sup>1</sup> For more information on the logistic regression, see Appendix 2.

<sup>2</sup> This study assumes that the effects of a 1.33 and a 1.35 Poverty Level Criterion would not be statistically different.

Section 2: Change to baseline: effects from the new policy

Table 2.H

Using the logit regression results: Calculating the number of households that would have taken telephone service with a nationwide 1.35 PLC in 2000

<sup>1</sup> It is assumed that states with a 1.5 PLC (marked by asterisk) keep it.

## Technical Appendix 1

### Background information for Table 2.C (Would Lifeline take rates increase due to a nationwide implementation of a 1.35 PLC?)

Below are the two regression results that are used to determine the effect that a nationwide implementation of a 1.35 poverty level criterion would have on Lifeline subscribership.

#### Regression 1 – Lifeline specification 1.

The regression model calculated from the data is

$$\begin{aligned} \%HHBelowOnePtFiveTakingLifeline = \\ -0.02 + 0.58 \times IncElgAbv125 + 1.04 \times California + 0.0167 \times TotSup. \end{aligned}$$

#### *Explanation of variables for Lifeline regression specification 1.*

The dependent variable is the number of households taking Lifeline divided by the number of households that are at or below 1.5 times the poverty level<sup>1</sup> (%HHBelowOnePtFiveTakingLifeline). For example, Texas had 263,934 Lifeline subscribers in 2000, and 1,575,172 households at or below 1.5 times the poverty line. The dependent variable data point for Texas therefore equals 0.15 (=263,934/1,348,089).

The first Independent Variable is IncEligAbv125. For each state, IncEligAbv125 equals that state's income eligibility level (if it has one) minus 1.25. So, for California, which has an income eligibility criterion of 1.5 times the poverty level, IncEligAbv125 equals 0.25 (= 1.5 – 1.25). For states with an income eligibility criterion at or below 1.25 times the poverty level, or for states without an income criterion, IncEligAbv125 equals 0. So, for Texas, which has an income eligibility criterion of 1.25 times the poverty level, IncEligAbv125 equals 0. The coefficient on this variable allows us to predict the number of households that would take Lifeline if a 1.35 PLC were adopted.

---

<sup>1</sup> The federal government establishes the poverty level threshold, which is based on the number of people living in the household, and whether the household is in the mainland United States, Alaska, or Hawaii. The Current Population Survey of Households (CPSH) data conveniently list the poverty level for each family in the family record portion of the data.

So for Texas, and other states with a 1.25 PLC (and for states without an income-based criterion), the new policy would increase the independent variable from 0.25 to 0.35, or by 0.1, and the dependent variable would increase 5.8 percentage points. The percentage point increase in percentage of households at or below 1.5 times the poverty level that take Lifeline because of a 1.35 PLC were implemented would be 5.8%.

$$= 0.58 * 0.1 = 0.058 \text{ or } 5.8\%.^2$$

The second Independent Variable is "California". In statistical terms, this is called a "dummy" variable, and equals 1 if the state is California, and is 0 otherwise. A dummy variable is often used in regression analysis to quantify specific effects. California is the only state using self-certification with an income-based criterion, and it appears to have more households taking Lifeline than the CPSH data would indicate are eligible for it. Therefore, singling out California with a dummy variable to measure a California-specific effect is warranted.

The variable "TotSup" is the amount of monthly telephone service support that Lifeline subscribers in each state receive (TotSup). The amount of total support that households receive varies with the local telephone carrier. For each state, TotSup is the amount of support from the largest carrier in that state. For example, in Texas, Lifeline subscribers in Southwestern Bell territories pay \$11.35 per month less for telephone service than regular telephone subscribers. Therefore, the TotSup datapoint for Texas is \$11.35. The more support that eligible households can receive, the more incentive they have to take Lifeline.

---

<sup>2</sup> The coefficient 0.58 is used to calculate the number of additional households that would take Lifeline with a 1.35 PLC. It is multiplied by the number of households at or below 1.5 times the poverty level (i.e., from 0.0 to 1.5 times the poverty level). Even though those households between 1.35 and 1.5 times the poverty level would not actually qualify for Lifeline, the model coefficient is estimated in such a way that a correct prediction is made.

## **Regression 2 – Lifeline specification 2.**

$$\begin{aligned} \%HHBelowOnePtFiveTakingLifeline = \\ 0.14 + 0.68 \times IncElgAbv125 + 1.04 \times California \end{aligned}$$

When comparing the two specifications, this one suggests that more households would take Lifeline because the coefficient 0.68 is greater than the 0.58 coefficient in Regression 1. So for Texas, and other states with a 1.25 PLC, and for states without an income criterion, the percentage point increase in the percentage of households at or below 1.5 times the poverty level that would take Lifeline because of a 1.35 PLC is 6.8%.

$$= 0.68 \times 0.1 = 0.068 \text{ or } 6.8\%.$$

### **Additional information about Lifeline regression specifications 1 and 2:**

#### *Data sources*

The data are from the Current Population Survey of Households (CPSH) (March 2000 data), the *Universal Service Monitoring Report* (Oct. 2002) and [www.lifelinesupport.org](http://www.lifelinesupport.org). The CPSH data are used to determine the number of households at or below 1.5 times the poverty level in each state. The *Universal Service Monitoring Report* was used to determine the number of households on Lifeline and the total support (number of dollars) that Lifeline subscribers received in each state. The website [www.lifelinesupport.org](http://www.lifelinesupport.org) was used to determine which states had income criteria for Lifeline, and the multiple of the Federal Poverty Guidelines that was required to be eligible for Lifeline in those states.

*Data are aggregated to the state level.*

CPSH has data for thousands of households, including whether the household has telephone service or not. If it were possible to do so, it would be best to conduct the analysis at the household level to maximize the number of observations and to account for several demographic factors. Unfortunately, CPSH data do not report whether the household is receiving the Lifeline subsidy. Therefore, individual data observations could not directly be used for the estimation. These regressions

therefore use data that have been aggregated to the state level. This means there is a single data point constructed for each state. The number of Lifeline subscribers for each state is available from the *Universal Service Monitoring Report*, however, so the CPSH data are aggregated to the state level. The number of households that are at or below 1.5 times the poverty level in a particular state is determined by summing the statistical weight of each household at or below 1.5 times the poverty level (the statistical weight for each household is determined by the Bureau of Labor Statistics), and dividing by 100. (The statistical weights add up to 100 times the number of households in the state, so dividing by 100 is a necessary step.)

### **Additional information on regression specification**

*The dependent variable: %HHBelowOnePtFiveTakingLifeline.*

As mentioned above, the dependent variable is the number of households taking Lifeline divided by the number of households that are at or below 1.5 times the poverty level. The dependent variable should be a measure of participation rate, and this requires a measure of takers and a measure of eligibility. An ideal measure would have been the number of households taking Lifeline divided by the total number of households that are eligible. Obtaining a measure of number of eligible households in each state is not possible, as will be explained below, so a surrogate measure “number of households that are at or below 1.5 times the poverty level” is used in its place. As long as the resulting surrogate participation rate is consistent across states, and used properly, the resulting analysis is correct.

The surrogate is necessary because of a measurement problem. There are several states where it is difficult to measure the number of households that are eligible for Lifeline. This happens most often when states use state-specific programs as eligibility criteria. Because the CPSH survey does not ask about every possible welfare program, the CPSH data cannot always be used to determine if a household is eligible for Lifeline or not.

Therefore, an alternative dependent variable was needed. The number of households below 1.5 times the poverty level is a reasonable proximate measure of support need. So, instead of dividing the number of households taking Lifeline by the number of households eligible for Lifeline, the dependent variable in this analysis is the number of households taking Lifeline divided by the number of households that are at or below 1.5 times the poverty level. The 1.5 times the poverty level threshold was chosen because it was the highest poverty level criterion used by any state, and it was used by several states.

*The principal independent variable: **IncEligAbv125***

As mentioned above, IncEligAbv125 equals that state's income eligibility level (if it has one) minus 1.25. If the state has no income eligibility criterion, or if it has one that is less than 1.25 times the poverty level, then the datapoint equals zero for that state.

The main objective of the regression analysis is to quantify the number of additional households that will subscribe to Lifeline with the implementation of an income-based eligibility criterion. Generally, states using higher multiples of the poverty level as an eligibility criterion have higher Lifeline participation rates than states using lower multiples of the poverty level criteria (or states using no income based criterion at all). The coefficient on IncEligAbv125 is used to predict the number of households that would take Lifeline due to a 1.35 PLC.

Preliminary modeling indicated that a nationwide implementation of an income criterion set at or below 1.25 times the poverty level would not increase the number of households taking Lifeline by a statistically significant amount. Because some states use lower multiples of the poverty level to determine Lifeline eligibility, one would expect that using a higher multiple of the poverty level would increase the number of households eligible for Lifeline in those states. However, basing this independent variable on lower multiples of the poverty level did not produce statistically significant results.

## Discussion

### *Discussion of independent variables:*

“California” is significant in both regressions (indeed, it was significant for all regression specifications in which it is included).

“TotSup” is positive, but is not significant. It is nearly significant, however. Further, there is strong economic reason to include it, because it measures a household’s incentive to take Lifeline, so it should not be eliminated from the model without good reason.

“IncEligAbv125” is significant in both regressions, but the size of the coefficient varies, and it is just barely significant (at the 10% level) when TotSup is included. Other specifications of the model were run that included whether each state had a particular program as an eligibility criteria. Throughout most of the trial specifications, the coefficient of IncEligAbv125 ranged between the two values presented in this report and remained significant. Therefore, the analyses presented in this report are very robust.

### Low-income Home Energy Assistance Program (LIHEAP)

Other trial variables are tested in the regression analysis, but for the reasons listed below, these trials are not adopted. However, when the regression included whether the state had energy assistance as a method for qualifying for Lifeline, the coefficient on IncEligAbv125 dropped 40% and was not even close to being significant. This trial regression model is contrary to sound economics for two reasons.

First, if the results were accurate, it would indicate that there would be no significant additional Lifeline subscribership with the implementation of a 1.35 PLC. This is not plausible, because the logistic regression analysis (see Appendix 2) indicates that a 1.35 PLC would significantly increase the number of households taking telephone service. Because we find strong evidence that a 1.35 PLC would increase telephone subscribership, a similar impact on Lifeline subscribership is also expected.

Second, if the coefficient on IncEligAbv125 from the Lifeline Regression were plugged into the model, it would indicate that just 10% of those households that

would become eligible would take Lifeline service, which seems far too low. Currently, over 30% of eligible households take Lifeline service. While the percentage of eligible households that would take Lifeline would surely decrease as eligibility requirements were eased, there is no reason to believe that it would drop by more than 2/3. Thus, adding a variable quantifying whether the state has energy assistance as an eligibility requirement leads to results that are not consistent with economic theory. That trial regression is therefore not used.<sup>3</sup>

Given that the coefficient on IncEligAbv125 ranges between 0.582 and 0.682 in all the other trial regressions, that range is used in this study. Table 2.D uses the results from the regression analysis to quantify the number of households that would take Lifeline as a result of a 1.35 PLC.

OLS regression was used using the statistical computer program Stata 7.0. The regression outputs (below) show the significance of each coefficient.

---

<sup>3</sup> We note that there is some multicollinearity between the energy assistance variable and TotSup. As a practical matter, if energy assistance is included in the regression and TotSup is removed, then the coefficient on IncElgAbv125 returns to normal levels and is significant.

## Technical Appendix 2

### Background information for Table 2.G (Would a 1.35 PLC for Lifeline increase telephone penetration?)

Below are the results of two logistic regressions. They show the effects that a 1.35 PLC for Lifeline has on telephone subscribership. Logistic regression 1 was used for the study. Logistic regression 2 tested whether California's self-certification process for income-based eligibility increased telephone penetration among low-income households.

#### Logistic regression 1 — Telephone Specification 1:

$$Y = 1 / (1 + e^{-[1.09 + 0.189 * X1 + -.753 * X2 + .728 * X3 + .521 * X4 + .032 * X5 + -.0326 * X6]})$$

#### *Explanation of variables for Telephone Specification 1.*

##### **Dependent variable:**

*Does the household have telephone service? (Y = H\_TELHHD)*

The dependent variable is whether the low-income household has telephone service. The data point for a household equals one if the household has telephone service, and equals zero otherwise. The dataset is comprised of data from only those households with incomes at or below 1.5 times the poverty level.

##### **Independent variables:**

*Is the household in a state with a 1.35 or less restrictive poverty level criterion? (X<sub>1</sub> = SH135BET)*

If the household is in a state that uses a 1.35 PLC for Lifeline (or if the state uses a higher multiple of the poverty level), then SH135BET equals one for that data point; otherwise, it equals zero. Because the sample is restricted to only those households that are at or below 1.35 times the poverty level, all data points for this

variable will be either a "0" or "1". Of these low-income households, 19.1 percent live in a state with a 1.35 to 1.5 PLC, and the independent variable SH135BET equals 1 for these households. For the other 80.9 percent, the independent variable SH135BET value equals 0.

This is the only independent variable used in the cost/benefit analysis, and therefore the accuracy of its coefficient is of most concern. The coefficient on this variable (0.189) is later used to quantify the increased probability that a low-income household will take telephone service (or fraction of) as the result of a 1.35 PLC.

This quantification is accomplished as follows: When  $X_1$  is changed,  $Y$  will change. For an individual household, the change of  $X_1$  from 0 to 1 models the effect of implementing a 1.35 PLC for that particular household. When modeling the change nationally,  $X_1$  is changed from .191 (19.1%, which reflects the fact that 19.1 percent of the sample households already live in a state with a 1.35 PLC) to 1. As a result,  $Y$  changes according to Logistic regression 1 above ( $Y$  is interpreted as a percentage—or probability—of households with telephone subscribership, and ranges from 0 to 1). When we change the "baseline" 19.1 percent of low-income households (living in a state with a 1.35 PLC) to the "new policy" 100.0 percent, then predicted telephone subscribership among sample households increases from 88.3 percent to 89.8 percent.

*Is the household a mobile home? ( $X_2 = \text{MOBHOME}$ )*

If the household is a mobile home, then the MOBHOME equals one for that datapoint; otherwise, it equals zero.

*Is the household owned by the householders? ( $X_3 = \text{OWNHOME}$ )*

If the householders own the home themselves, then OWNHOME for that data point equals 1; otherwise, it equals zero.

*Percentage of households who lived at that address for at least one year. ( $X_4 = \text{PCTONEYEAR}$ )*

The data points for PCTONEYEAR equal the percentage of the adults in that household that have lived at that address for at least one year.

*Total value of household income ( $X_5 = HTOTVAL$ )*

The data points for each household equal the household's entire annual income including the value of transfer (e.g., welfare) payments.

*Is someone in the household on food stamps? ( $X_6 = HFOODSP$ )*

If someone in the household is on food stamps, then HFOODSP equals one for that data point; otherwise, it equals zero.

For the results of this specification, see page 51, below.

### **Logistic regression 2 — Telephone Specification 2:**

Telephone Specification 2 includes all the variables from specification 1, and includes the variable California.

*California. (CALIF)*

If the household is in California, the variable equals one, otherwise, it equals zero.

For the results of this specification, see page 52, below.

### **Additional information about specifications 1 and 2**

#### *Price*

None of the logistic regression specifications include the price of telephone service. This is because the price that each household faces is unknown. Different carriers offer service at different prices, and even within the same carrier, the price of telephone service varies from city to city. Because the carrier that would serve each household is unknown, price cannot be included in the logistic regressions. Earlier research has shown that omitting the price of telephone service does not affect the coefficients of the other variables in this logistic regression. This is

because the coefficient on price would be tiny, so any “missing variable” bias would also be tiny.<sup>4</sup>

### *Data sources*

The data in this analysis are from the Current Population Survey of Households (CPSH) from March 2000. CPSH data contain information on over 50,000 households. From these data, the relevant demographic information are extracted for analysis, including: 1) whether the household has telephone service, 2) household’s total income (including the value of transfer payments), 3) the poverty level for that household (i.e., household earnings divided by state definition of poverty-level income), 4) the state the household lives in, 5) whether the household dwelling is owned or rented, 6) the number of adult members that live in the household for at least one year, 7) the number of adults living in the household, and 8) the list of subsidies the household receives, which included Federal Public Housing Assistance (Section 8), Food Stamps, LIHEAP, Medicaid, and Supplemental Security Income. The CPSH data also includes information on whether or not the household has telephone service.

### *Household-level data are used*

All the information is available for each household, so the analysis is conducted at the household level; aggregating to the state level is unnecessary.

### *Logistic regression preferred to “standard” OLS regression*

Because the dependent variable is binary (a household either has telephone service and is thereby assigned a values of one (1), or it does not and is thereby assigned a value of 0 (zero), logistic regression analysis is preferred to a Linear Probability model using Ordinary Least Squares (OLS). With binary dependent variables, linear regressions can produce erroneous results, such as a household having more

---

<sup>4</sup> The formula for calculating the missing variable bias can be found in many textbooks, including William H. Greene, *Econometric Analysis*, at 402 (3<sup>rd</sup> ed. 1997). Observation of the equation shows that if the missing variable is uncorrelated with an independent variable, then the coefficient on that independent variable is unbiased. A regression was run to see if telephone prices are correlated with the variable SH135BET. The weighted average price for each of the 41 states for which price data are available was created. The variable price was then regressed on the variable SH135BET. There was no correlation. (See Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Reference Book*, at 7-8 (2002).

than a 100% probability of taking telephone service, or a household having a negative probability of taking telephone service. Both of these situations are impossible. Logistic regression analysis avoids this problem, and is appropriate for measuring saturation concepts such as telephone penetration. The following graph illustrates the difference between the two approaches. In the following graph (taken from the Internet), “linear probability model” refers to OLS regression results, and  $Y$  (ranging from 0 to 1) refers to probability.<sup>5</sup>

Unfortunately, logistic regressions produce coefficients that are more difficult to interpret than the coefficients that OLS produces. A few additional computations are needed to use the coefficients in the cost-benefit analysis. Therefore, Table 2.H is created, which uses the coefficients from the logistic regression to determine the number of households that would have taken phone service in 2000 and 2004 if a 1.35 poverty level criterion were instituted nationally. The number of households that would take telephone service because of a 1.35 PLC is then compared to the number of households that would take Lifeline in Table 2.I.

### *Quantifying logistic regression coefficients*

<sup>5</sup> For more information on logistic regression analysis, see Damodar Gujarati, Basic Econometrics at 481-491 (2<sup>nd</sup> ed. 1998).

In a standard regression analysis, the effect that a change in the independent variable has on the dependent variable is relatively easy to measure because it is linear. When using standard linear regression, a model is often expressed as follows:  $Y = a + b \cdot X$ . In this equation, Y represents the dependent variable, "a" represents a constant, and "b" is the coefficient from the regression which is multiplied by the size of the independent variable X. The symbol  $\Delta$  is often used to represent the change in a variable.

The change in Y caused by a change in X is then represented like this:  $\Delta Y = b \cdot \Delta X$ . Thus, the change in Y for a change in an independent variable is simply the coefficient on the independent variable times the amount of the change in that independent variable.

Because logistic regression analysis is not linear, however, the above calculation cannot be made directly. Instead, two intermediate calculations must be made. The first calculation quantifies the dependent variable using the mean values of the independent variables. The second calculation quantifies the dependent variable using the same means as in the first calculation, except that one of the independent variables is set to the new policy level. The second calculation replaces the mean of the independent of the variable in question (e.g., a policy variable) with an appropriate value representing the change in the variable. If all states adopted a 1.35 PLC, then the percentage of low income households living in a state with a 1.35 PLC would move from 19.1% to 100%. So, in this case, the mean of SH135BET (which equals 0.191) would be replaced with 1.00.

For both calculations, Y is calculated by the following equation:

$$Y = 1 / (1 + e^{-[1.09 + 0.189 \cdot X_1 + -.753 \cdot X_2 + .728 \cdot X_3 + .521 \cdot X_4 + .032 \cdot X_5 + -.0326 \cdot X_6]})$$

Table 2.H explains the calculations. The coefficient values from the logistic regression are in column a. The means of the independent variables are in column b. Column c multiplies columns a and b. These products are often called the "partial effects". The partial effects are then summed to create a Z score. The Z score is simply a shorthand way of representing  $a + b_1 \cdot x_1 + b_2 \cdot x_2 + \dots$ . When evaluating the independent variables at their mean values, the Z score equals 2.025. Y (the probability that a household will take telephone service) is then calculated:  $Y = 1 / (1 + e^{-Z})$ , which equals 88.3%. This means that, nationwide, households with incomes below 1.35 times the poverty level have an 88.3% chance of having telephone service.

The second calculation is identical to the first, with one exception. Instead of using the mean value of SH135BET, the mean is replaced by a 1. As discussed above, this would be the case if all states have a 1.35 PLC. Just as before, the coefficients (column a) are multiplied by the means (column d) to produce the new partial effect. Notice that for SH135BET, the mean value of 0.191 was replaced with 1.00. The new partial effects are listed in column E. These partial effects are then summed to form the new Z score, which equals 2.178. This new Z score is then used in the calculation as before:  $Y = 1/(1+e^{-Z})$ . The new value for Y is 89.8%. This means that if all states adopted a 1.35 PLC, then 89.8% of households with incomes at or below 1.35 times the poverty level would have telephone service. This represents a 1.5 percentage point increase (89.8% - 88.3%) in telephone subscription rates.

To determine the number of households in 2004 that would take phone service due to a 1.35 PLC, the difference in the Y's (1.5%) is multiplied by the number of households that are at or below 1.35 times the poverty level. Projections made using the CPSH data indicate that in 2004, there will be 17,433,000 households at or below 1.35 times the poverty level. Thus, multiplying 1.5% (which equals 0.015) times 17,433,000 households equals 259,000 households. Thus, 259,000 households would take telephone service due to a 1.35 PLC in 2004.

### *Restricted use of observations and variables*

The logistic regression analyses uses only selected observations and variables for good reason. One reason is to address a specific policy proposal from the Joint Board. The Joint Board is recommending using a 1.35 PLC. In order to determine how such a plan would affect households at or below 1.35 times the poverty level, only those households with incomes at or below 1.35 times the poverty level are included in this analysis.<sup>6</sup> There are 8,358 usable observations.

---

<sup>6</sup> Alternatively, the sample could be restricted to households at or below 1.33 times the poverty level because there are three states that have a 1.33 PLC. By including households at 1.34 and 1.35 times the poverty level, we are implicitly assuming that those households are eligible for Lifeline even though they just miss qualifying for it. On the other hand, restricting the sample to households at or below 1.33 times the poverty line would exclude many more households from the sample in other states with a 1.5 PLC. It is not clear whether a 1.33 PLC restriction is better than a 1.35 PLC. Fortunately, the results are the same in either case. For both models, the coefficient on SH135BET is virtually identical with either sample restriction.

The number of state specific variables that can be included in the analysis is limited because only 8 states have SH135BET equal to one. Therefore, including additional state specific variables reduces the accuracy of the coefficient SH135BET, the important policy variable used to quantify costs and benefits.

### **Discussion of variables in the specifications**

*Assumption that effects of a 1.33 PLC are indistinguishable from a 1.35 PLC*

As mentioned earlier, this study assumes that the effects of a 1.33 PLC are statistically indistinguishable from a 1.35 PLC. Therefore, SH135BET equals one for the states that have 1.33 or 1.5 PLCs. There is no alternative to measuring the effect of a 1.35 PLC because no states use a 1.35 PLC.

Further, the fact that this analysis treats states with a 1.5 PLC the same as states with a 1.33 PLC is not problematic. This is because the households in the sample are restricted to those that are at or below 1.35 times the poverty level. Thus, all the households in the sample will make the same economic choice whether the state in which they live has a 1.33 (or 1.35) or 1.50 PLC, because the households qualify for Lifeline under either criterion.

### *Inclusion of independent variables*

HFOODSP was included because it captures the concept of "poverty" in a way that income alone does not. Participation in the Food Stamps Program is an indicator of special household needs. Without a variable like HFOODSP to capture poverty in a way that income alone does not, the coefficient on SH135BET is negative and insignificant, which is counter to a reasonable economic theory of Lifeline effects.

### **CALIFORNIA-Unique Effects.**

The CALIF (California) variable was tested as a separate variable in the second logistic regression because it was included in the Lifeline Model. The hypothesis is that California's policy of using self-certification for income-eligibility could possibly have a unique impact on telephone subscribership that is different than other states. Just as California was singled out in the Lifeline subscribership regressions, one might reason that the unique policy of California should also be reflected in the telephone subscribership analysis. The second logistic regression examines the effects of accounting for California separately.

The results indicate that living in California does not have a unique effect on telephone subscribership. The second specification shows that the coefficient on CALIF is not significant, which suggests that California's self-certification policy does not statistically significantly increase telephone subscribership among Californians (compared to other states) with incomes at or below 1.35 times the poverty level.<sup>7</sup>

The inclusion of the variable California in the logistic regression has a large erroneous impact on the primary variable of interest, SH135BET (whether or not the household is in a state with at least a 1.35 poverty level criterion). If the logistic regression includes the variable California, then the coefficient on SH135BET is smaller and not statistically significant.<sup>8</sup> If the variable California is not included in the logistic regression, then the coefficient on SH135BET is larger and statistically significant, as expected. This larger SH135BET coefficient is found because the Lifeline program has a somewhat larger impact on low-income households in California than in other states.

Furthermore, including a CALIF variable would compromise statistical accuracy. Including the CALIF variable would lower the statistical accuracy of the income criterion effect. Half of all households that live in a state with at least a 1.35 poverty level criterion for Lifeline are in California, so accounting for California separately would wrongly remove any influence California observations have on the "national" coefficient for the variable SH135BET. The influence from California observations should be included in the coefficient for SH135BET, and so the 2nd model excluding the California influence (by including a CALIF variable) is not used.

Because there is no compelling reason to account for California separately, and because the coefficient on the variable California is not significant, households in

---

<sup>7</sup> Because California has above-expected Lifeline subscribership, one might expect it to have above-expected telephone subscribership among households at or below 1.35 times the poverty level. However, the data does not support this. When responding to the CPSH survey, households have no incentive to misreport their income, so those households in California that report their income as being below the 1.35 times the poverty line most likely really are below that threshold. The result is that California telephone penetration follows that of the other states.

<sup>8</sup> Although the coefficient on SH135BET is still positive, it is not statistically significant. If SH135BET is not statistically significant, then it would be difficult to conclude that states having a 1.35 PLC (or less restrictive poverty level criterion) have any impact on telephone penetration.

California are not singled out in the analysis by including a separate CALIF variable. Thus, the California variable should not be included in the logistic regression.

### *Total Lifeline support*

The variable Total Lifeline support for the household is not included in the final model for two reasons. (See discussion of "TotSup" from Technical Appendix 1.) First, the total support that individuals within a state receive depends on the carrier that would potentially serve them. Thus, although the amount of total support from the largest carrier in the state was chosen, there would be a large number of households for which the variable "TotSup" would contain the wrong amount of support. For the majority of households in the CPSH data, the location of the household is unidentifiable, so the carrier that would potentially serve that household is also unidentifiable.

Second, when the variable "TotSup" was tried in the logistic regression, it proved not significant. When "TotSup" was included, the coefficient on SH135BET was smaller, but was still significant.

The logistic regression was run using the statistical computer program SPSS version 10. The regression analysis computer printouts are displayed below:

**SEPARATE STATEMENT OF  
CHAIRMAN BOB ROWE, MONTANA PUBLIC SERVICE COMMISSION**

Re: Federal-State Joint Board on Universal Service, Recommended Decision on Low-Income Programs.

This inquiry developed a wealth of good ideas: Good ideas to increase awareness of Lifeline and Link-up; to better match eligibility requirements with need; to increase participation; and to lower transaction costs while preserving accountability. Ultimately, all of these ideas are intended to ensure that the programs better achieve Congress's goals for them.

In very many instances, the Joint Board recommends that this compendium of good ideas be used by the states to tailor programs most appropriate to their specific circumstances. This is very much a prudential, "cooperative federalist" approach to achieving the programs' purposes. It encourages state creativity. To succeed, it will require greater effort and engagement from many states, including my own. Specifically, it will require close coordination between state public utility commissions, state and local human services agencies, the industry, and other stakeholders.

Consistent with cooperative federalism, I hope this recommendation will also stimulate a multi-directional dialogue, with states sharing successful strategies, and reporting back through some efficient medium on their implementation of this recommendation in ways that will provide useful information to the FCC and to others interested.

I am pleased that the Joint Board gave this referral the same close attention it has afforded the other important issues with which it has recently dealt.

**SEPARATE STATEMENT OF  
COMMISSIONER LILA A. JABER, FLORIDA PUBLIC SERVICE COMMISSION**

Re: Federal-State Joint Board on Universal Service, Recommended Decision on Low-Income Programs.

An important aspect of the Federal Communications Commission's (FCC) mission is to ensure that telecommunications services are available to "all the people" of the United States. To that end, the Low-Income Program has been designed to assist eligible economically disadvantaged households that want, but cannot afford, telephone service by discounting services provided by local telephone companies. I believe that this recommended decision, if implemented, will improve the effectiveness of the program by addressing issues relating to sustainability and accountability. I wish to thank my colleagues on this Joint Board for a balanced and well-reasoned recommended decision.

I am optimistic that this recommended decision will ensure that those customers that need assistance will be eligible to receive it by expanding the list of federal eligibility criteria; I support their inclusion. The long-term sustainability of the program requires effective accountability. Several states have taken such steps to ensure program integrity by utilizing automated enrollment procedures both to add eligible households and to remove them when they no longer qualify. I am pleased that this recommended decision has been used to highlight successful strategies that states may consider implementing to improve participation in the program. I am especially encouraged by the recommended decision's proposal that would require states to establish a verification plan. While I have doubts about the use of self-certification as a means of verification, I trust that the flexibility recommended for state implementation will successfully root out any waste, fraud, and abuse that may exist in the program.

**SEPARATE STATEMENT OF  
BILLY JACK GREGG, DIRECTOR OF THE CONSUMER ADVOCATE  
DIVISION, PUBLIC SERVICE COMMISSION OF WEST VIRGINIA**

Re: Federal-State Joint Board on Universal Service, Recommended Decision on Low-Income Programs.

According to the Commission's latest report on telephone subscribership, 95.1% of the 109 million households in the United States have telephone service.<sup>1</sup> This is a remarkable achievement, but it still falls short of the goal of universal availability and affordability of service set forth in the 1996 Telecommunications Act. The fact that 95.1% of homes are connected to the telecommunications network means that over 5 million households in our country do not have telephone service. Moreover, this number has remained persistent. Since 1990, the overall number of households and the percentage of households with telephone service have grown, while the number of households without telephone service has continued to range between 4.8 and 6.4 million.<sup>2</sup>

The Joint Board and the Commission took action in 1997 to address the large number of unconnected households in our nation by expanding the federal Lifeline and Link-Up programs. Since that time 7.4 million households have been added to the telephone network and the percentage of households without phone service has dropped.<sup>3</sup> Unfortunately, in spite of these efforts and the efforts of the individual States, the number of households without phone service remains high.

Poverty is obviously the primary factor limiting the ability of unconnected households to join the telephone network. Low-income customers are significantly less likely to have telephone service than are other consumers.<sup>4</sup> The federal Lifeline and Link-Up programs provide numerous options to low-income individuals and families to overcome the cost of obtaining and maintaining phone service. The Link-Up program will pay the lion's share of local connection charges and provides for the waiver of all deposit requirements if a customer opts for toll-blocking service. Once a household is connected to the phone system, the Lifeline program provides substantial federal discounts off of normal monthly recurring charges, and encourages states to add discounts of their own. In some cases, these discounts can represent 90% of a regular phone bill. However, federal and state programs to assist in the payment of phone bills are of no use if a low-income customer cannot get phone service because of an outstanding balance for unpaid local and/or long distance service.

<sup>1</sup> *Telephone Subscribership in the United States*, FCC Wireline Competition Bureau, IAD (Feb. 12, 2003), Table 1, [http://www.fcc.gov/Bureaus/Common\\_Carrier/Reports/FCC-State\\_Link/IAD/subs0702.pdf](http://www.fcc.gov/Bureaus/Common_Carrier/Reports/FCC-State_Link/IAD/subs0702.pdf).

<sup>2</sup> The number of households without telephone service last topped 6 million in November 2000 and has only dipped below 5 million once, in March 2002. *Id.*, Table 1.

<sup>3</sup> *Id.*, Table 1.

<sup>4</sup> The telephone penetration rate in households with annual incomes below \$5,000 is 78.9%, rising to 99.3% in households with annual incomes above \$75,000. *Id.*, Table 4.

I believe a large number of the 5 to 6 million households that do not currently have phone service, do indeed want phone service and can afford the discounted Lifeline monthly charges on a going-forward basis. However, these customers cannot be connected to the network because they have previously had phone service, lost it for non-payment of local and/or long distance charges, and cannot afford payment of the unpaid balance. In short, the outstanding balances from previous phone service for these low-income customers stand as a barrier to these customers reconnecting to the telephone network.

In taking further action on modifying the Lifeline and Link-Up programs, I urge the Commission to solicit data from interested parties to document the number of customers that remain disconnected because of prior balances, and the number of qualifying Lifeline and Link-Up customers who are precluded from obtaining service because of outstanding balances for local and/or long distance service. The Commission should also investigate whether changes can be made to the Link-Up program to address these prior balances for local and/or long distance service.<sup>5</sup> Such changes could include reconnection upon agreement by the qualifying customer to pay off the outstanding balances over a period of months – for example, six months or twelve months – in equal monthly payments. In return, the customer would be provided with Lifeline service with mandatory toll blocking until the past due balance was paid off. The Commission could also invite comment on whether it would be appropriate for the Link-Up program to pay a set percentage of the past outstanding balances for local service, and whether such payments should be contingent on state matching payments.

I applaud the work of the States, the Commission and the Joint Board in attempting to make the Lifeline and Link-Up programs more effective. I sincerely hope that the Recommended Decision which we issue today will move these efforts forward. However, we must never lose sight of the fact that our goal is to connect the unconnected and to keep phone service affordable for everyone. We must continue to search out and eliminate programmatic and structural impediments to greater participation in the telecommunications network by all of our citizens. I believe expanding Lifeline and Link-Up assistance to address the issue of past balances will go a long way toward eliminating a major hurdle faced by low-income customers in attempting to become full participants in our globally connected society.

---

<sup>5</sup> I recognize that the Fifth Circuit has previously held that a rule prohibiting disconnections of local service for non-payment of long distance bills exceeded the Commission's jurisdiction, absent additional justification. *Texas Office of Public Utility Counsel v. FCC*, 183 F.3d 393, 424 (5<sup>th</sup> Cir. 1999). The issue I raise now is the different but related issue of whether the Commission may properly design a program to assist in reconnecting low-income customers to the network. Such a program could involve partnering with States or providing inducements to the States to reconnect such customers.
